

Term	Acronym	Definition	Category
Best in KLAS (KLAS)	KLAS	An award that recognizes software and services companies who excel in helping healthcare professionals improve patient care. All rankings are a direct result of the feedback of thousands of providers over the last year. (KLAS is not an acronym. It is formed by the first initial of the four founders.)	Industry
Enterprise Mobility Management	EMM	A collective set of policies, practices, and technology solutions that enable organizations to manage and control mobile devices for corporate use. These devices may be BYOD (Bring Your Own Device) or corporate-owned devices used to access sensitive business information.	Generic
Information Security Management Service (ISMS)	ISMS	Aims to ensure the confidentiality, integrity and availability of an organization's information, data and IT services. ITIL Security Management usually forms part of an organizational approach to security management which has a wider scope than the IT Service Provider.	Compliance
Information Technology Infrastructure Library (ITIL)	ITIL	A set of detailed practices for IT service management (ITSM) that focuses on aligning IT services with the needs of business.	Generic
IT Service Management (ITSM)	ITSM	The service area that performs activities that to design, build, deliver, operate, and control information technology services offered to customers.	IT
Java Archive (JAR)	JAR	A file format used to bundle all components required by a Java applet. JAR files simplify the downloading of applets since all the components (.class files, images, sounds, etc.) can be packaged into a single file.	Generic
Java Virtual Machine (JVM)	JVM	A virtual machine that enables a computer to run Java programs as well as programs written in other languages that are also compiled to Java bytecode. The JVM is detailed by a specification that formally describes what is required in a JVM implementation.	Generic
JavaScript Object Notation (JSON)	JSON	A minimal, readable format for structuring data. It is used primarily to transmit data between a server and web application, as an alternative to XML.	Generic
JSON Web Token (JWT)	JWT	A proposed Internet standard for creating data with optional signature and/or optional encryption whose payload holds JSON that asserts some number of claims. The tokens are signed either using a private secret or a public/private key.	Generic
Just in Time (JIT)	JIT		Generic
Key Management Service (KMS)	KMS	Refers to management of cryptographic keys in a cryptosystem. This includes dealing with the generation, exchange, storage, use, crypto-shredding, and replacement of keys. It includes cryptographic protocol design, key servers, user procedures, and other relevant protocols.	AWS Cloud
Key Performance Indicator (KPI)	KPI	A quantifiable measure used to evaluate the success of an organization, employee, etc. in meeting objectives for performance.	Generic
Laboratory Information Management System (LIMS)	LIMS	An application that allows you to effectively manage samples and associated data	Generic
Load Balancer (LB)	LB		Generic
Local File Inclusion Remote File Inclusion (LFI RFI)	LFI RFI	Types of code injection cyber attack.	Security
Machine Learning (ML)	ML	The use of algorithms to allow a computer to analyze data for the purpose of learning what action to take when a specific pattern or event occurs.	Big Data
Machine Learning (ML)	ML	The study of computer algorithms that improve automatically through experience and by the use of data. It is seen as a part of artificial intelligence.	Big Data

Machine-to-Machine (M2M)	M2M	Any technology that enables networked devices to exchange information and perform actions without the manual assistance of humans. The main purpose of M2M technology is to tap into sensor data and transmit it to a network. Unlike SCADA or other remote monitoring tools, M2M systems often use public networks and access methods — for example, cellular or Ethernet — to make it more cost-effective.	Big Data
Management Instrumentation & Discovery Server (MID)	MID Server	a Java application that runs as a Windows service or UNIX daemon. The MID Server facilitates communication and movement of data between the ServiceNow platform and external applications, data sources, and services.	Big Data
Master Service Agreement (MSA)	MSA		Generic
Medical Record Number (MRN)	MRN	— is organization specific. The number is used by a medical facility as a systematic documentation of a patient’s medical history and care during each hospital stay.	Generic
Mobile Application Management (MAM)	MAM	Software that secures and enables IT control over enterprise applications on end users' corporate and personal smartphones and tablets. MAM software allows IT administrators to apply and enforce corporate policies on mobile apps and limit the sharing of corporate data among apps. It involves user identity policy, single sign-on, and conditional access tailored by role and device and monitors for and pushes app updates, including mobile document management for online or cloud-provisioned apps.	Generic
Mobile Device Management (MDM)	MDM	Software that companies can use to lock down, control, encrypt, and enforce policies on mobile devices such as tablets and smart phones.	Compliance
MSI Files	MSI	MSI is an installer package file format used by Windows. Its name comes from the program's original title, Microsoft Installer, which has since changed to Windows Installer. MSI files are used for installation, storage, and removal of programs.	Generic
Multi Exit Discriminator Attribute (MED)	MED	A non-transitive attribute — meaning not propagated throughout the Internet — but only to adjacent Autonomous Systems (ASs). The MED attribute is optional, so it is not always sent with the BGP updates. The purpose of MED is to influence how other ASs enter your AS to reach a certain prefix. Also notated as MULTI_EXIT_DISC.	Generic
Multifactor Authentication (MFA)	MFA	A security system that requires more than one method of authentication from independent categories of credentials to verify the user's identity for a login or other transaction.	Security
Unique Identifier	UID	An identifier that is guaranteed to be unique among all identifiers used for those objects and for a specific purpose. The concept was formalized early in the development of Computer science and Information systems.	
	iSCSI	An Internet Protocol-based storage networking standard for linking data storage facilities. It provides block-level access to storage devices by carrying SCSI commands over a TCP/IP network.	Protocol
